

Tasca S2.01. Nocions bàsiques SQL

Nivell 1

Exercici 1

A partir dels documents adjunts (estructura_dades i dades_introduir), importa les dues taules. Mostra les característiques principals de l'esquema creat i explica les diferents taules i variables que existeixen. Assegura't d'incloure un diagrama que il·lustri la relació entre les diferents taules i variables.

Creem les taules i importem les dades, des de els documents adjunts, enganxant el text de cada arxiu i executant la totalitat de cada script. Després de comprovar que no han sorgit problemes, i que les taules apareixen al actualitzar les bases de dades, comencem a estudiar-ne el resultat.

En aquest primer esquema de taules podem observar que les dues que conformen la base de dades tenen una relació de 1 a N. La taula de fets (transaction) mostra cada una de les accions comercials de l'empresa. Hi podem trobar una Foreign Key (company_id) que fa referència a la Primary Key (id) de la taula company, on es detallen les dades de cada companyia (clients). Per tant, cada transacció serà única, però una mateixa companyia pot haver realitzat diverses transaccions.

Entrant a les dades de cada taula, podem observar com cada transacció s'acompanya de característiques com el numero de la tarjeta de credit i l'Id de la companyia (com a valor de text), user_id com a valor numèric INT, longitud i latitud com a valors FLOAT, La data expressada com a TIMESTAMP, el valor de la transacció, amb dos decimals, al ser un valor monetari i finalment, trobem la columna declined amb característiques booleanes, expressat com a TINYINT.

Per altre banda, totes les característiques de les companyies a la taula de dimensió son característiques qualitatives, i per tant, estan expressades com a dades de tipus VARCHAR.

Exercici 2

Utilitzant JOIN realitzaràs les següents consultes:

Llistat dels països que estan generant vendes.

```
10  
11 •  SELECT DISTINCT country FROM company co  
12     JOIN transaction tr ON tr.company_id = co.id;  
13  
14
```

The screenshot shows a MySQL query interface with the following details:

- Result Grid:** Shows a list of countries with their names: Germany, Australia, United States, New Zealand, Norway, United Kingdom, Italy, Belgium, Sweden, Ireland, China, Canada, France, Netherlands, and Spain.
- Action Output:** A log of actions taken:
 - 100168 12:59:50: SELECT company_id, company_name, COUNT(tr.id) AS total_transacciones, CASE WHEN C... 100 row(s) returned
 - 100169 13:00:19: SELECT company_id, company_name, COUNT(tr.id) AS total_transacciones, CASE WHEN C... 100 row(s) returned
 - 100170 13:00:58: SELECT company_id, company_name as nom, COUNT(tr.id) AS total, CASE WHEN C... Error Code: 1054. Unknown column 'total_transacciones' in 'order clause'
 - 100171 13:01:07: SELECT company_id, company_name as nom, COUNT(tr.id) AS total, CASE WHEN C... 100 row(s) returned
 - 100172 13:01:29: SELECT company_id, company_name as nom, COUNT(tr.id) AS total, CASE WHEN C... 100 row(s) returned
 - 100173 13:14:43: SELECT DISTINCT country FROM company co JOIN transaction tr ON tr.company_id... 15 row(s) returned

Des de quants països es generen les vendes.

```
17 •  SELECT COUNT(DISTINCT Country) AS RecomptePaisos FROM company co  
18     JOIN transaction tr ON tr.company_id = co.id;  
19  
20     -- Identifica la companyia amb la mitjana més gran de vendes
```

The screenshot shows a MySQL query interface with the following details:

- Result Grid:** Shows a single row with the value 15, labeled "RecomptePaisos".
- Action Output:** A log of actions taken:
 - 100169 13:00:19: SELECT company_id, company_name, COUNT(tr.id) AS total_transacciones, CASE WHEN C... 100 row(s) returned
 - 100170 13:00:58: SELECT company_id, company_name as nom, COUNT(tr.id) AS total, CASE WHEN C... Error Code: 1054. Unknown column 'total_transacciones' in 'order clause'
 - 100171 13:01:07: SELECT company_id, company_name as nom, COUNT(tr.id) AS total, CASE WHEN C... 100 row(s) returned
 - 100172 13:01:29: SELECT company_id, company_name as nom, COUNT(tr.id) AS total, CASE WHEN C... 100 row(s) returned
 - 100173 13:14:43: SELECT DISTINCT country FROM company co JOIN transaction tr ON tr.company_id... 15 row(s) returned
 - 100174 13:15:56: SELECT COUNT(DISTINCT Country) AS RecomptePaisos FROM company co JOIN t... 1 row(s) returned

The screenshot shows a MySQL query interface with the following details:

- Result Grid:** Shows a single row with the value 15, labeled "RecomptePaisos".
- Action Output:** A log of actions taken:
 - 100169 13:00:19: SELECT company_id, company_name, COUNT(tr.id) AS total_transacciones, CASE WHEN C... 100 row(s) returned
 - 100170 13:00:58: SELECT company_id, company_name as nom, COUNT(tr.id) AS total, CASE WHEN C... Error Code: 1054. Unknown column 'total_transacciones' in 'order clause'
 - 100171 13:01:07: SELECT company_id, company_name as nom, COUNT(tr.id) AS total, CASE WHEN C... 100 row(s) returned
 - 100172 13:01:29: SELECT company_id, company_name as nom, COUNT(tr.id) AS total, CASE WHEN C... 100 row(s) returned
 - 100173 13:14:43: SELECT DISTINCT country FROM company co JOIN transaction tr ON tr.company_id... 15 row(s) returned
 - 100174 13:15:56: SELECT COUNT(DISTINCT Country) AS RecomptePaisos FROM company co JOIN t... 1 row(s) returned

El resultat coincideix amb el total de la pregunta anterior.

Identifica la companyia amb la mitjana més gran de vendes.

```
20      -- Identifica la companyia amb la mitjana més gran de vendes.  
21  
22 •  SELECT company_name, ROUND(AVG(amount), 2) AS MitjaCompanyia FROM company co  
23   JOIN transaction tr ON tr.company_id = co.id  
24   WHERE declined = 0  
25   GROUP BY company_name  
26   ORDER BY MitjaCompanyia DESC  
27   LIMIT 1;
```

| Result Grid | | Filter Rows: | Export: | Wrap Cell Content: | Message |
|---------------------------|----------------|--------------|---------|--------------------|---------|
| company_name | MitjaCompanyia | | | | |
| Ac Fermentum Incorporated | 284.91 | | | | |

| result 41 | | | |
|---------------|----------|----------------------------------------------------------------------------|-------------------|
| Output | | | |
| Action Output | | | |
| # | Time | Action | Message |
| 100174 | 13:15:56 | SELECT COUNT(DISTINCT Country) AS RecomptePaisos FROM company co JOIN t... | 1 row(s) returned |
| 100175 | 13:17:08 | SELECT company_name, ROUND(AVG(amount), 2) AS MitjaCompanyia FROM comp... | 1 row(s) returned |

En aquest cas hem considerat només les comandes acabades, que afecten directament a la mitjana.

Exercici 3

Utilitzant només subconsultes (sense utilitzar JOIN):

Mostra totes les transaccions realitzades per empreses d'Alemanya.

```
65 •  SELECT tr.id FROM transaction tr  
66   WHERE EXISTS (  
67     SELECT co.id FROM company co  
68     WHERE co.country = 'Germany')  
69   ;  
70  
71   -- Llista les empreses que han realitzat transaccions per un amount superior a la mitjana de totes les transaccions.
```

| Result Grid | | Filter Rows: | Edit: | Export/Import: | Wrap Cell Content: | Fetch rows: |
|-------------|---------------------------------------|--------------|-------|----------------|--------------------|-------------|
| | id | | | | | |
| ▶ | 00138D3B-206D-4C03-94B7-63A2676EB984 | | | | | |
| ▶ | 0013C1B6-3B84-4D6C-8154-E2B3FEBC8E9 | | | | | |
| ▶ | 00201A11-2E62-44C4-941D-198FC8DB77F0 | | | | | |

| ▶ | 005A5A7B-1F1A-4B6C-9B15-1625A78C9C38 | | | | | |
| ▶ | 00687139-48B2-4FFA-8E73-B20376F04AB4 | | | | | |
| ▶ | 0074F4DD-32F1-4B27-8758-55896314623A | | | | | |
| ▶ | 00AACB9CD-39D6-4DCB-8A1D-13BE73DC90A9 | | | | | |

| transaction 34 | | | |
|----------------|------|----------|------------------------------------------------------------------------------------------------------------------------|
| Output | | | |
| Action Output | | | |
| # | Time | Action | Message |
| ✓ | 61 | 11:28:01 | SELECT tr.id FROM transaction tr WHERE company_id IN (SELECT co.id FROM company co WHERE co.... 13291 row(s) returned |
| ✓ | 62 | 11:29:26 | SELECT tr.id FROM transaction tr WHERE EXISTS (SELECT co.id FROM company co WHERE co.... 100000 row(s) returned |

Originalment fet amb IN, però canviat a EXISTS per bones pràctiques, amb l'objectiu de millorar l'eficiència.

Llista les empreses que han realitzat transaccions per un amount superior a la mitjana de totes les transaccions.

Després de realitzar la consulta, observem que totes les companyies han fet transaccions per sobre de la mitjana.

```
73 •   SELECT co.company_name FROM company co
74   WHERE EXISTS (
75     SELECT company_id FROM transaction
76     WHERE amount > (SELECT AVG(amount) FROM transaction))
77   ;
78
```

The screenshot shows a database interface with a query editor and a results grid. The query retrieves company names where the average transaction amount is less than the individual company's transaction amount. The results grid displays 36 company names, and the action output shows two log entries indicating successful execution and retrieval of 100 rows.

| company_name |
|------------------------------|
| Ac Fermentum Incorporated |
| Magna A Neque Industries |
| Fusce Corp. |
| Convalis In Incorporated |
| Ante Iaculis Nec Foundation |
| Donec Ltd |
| Sed Nunc Ltd |
| Amet Nulla Donec Corporation |
| company 36 |

Output:

| # | Time | Action | Message |
|----|----------|-------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| 63 | 11:32:00 | SELECT co.company_name FROM company co WHERE co.id IN (SELECT company_id FROM transaction WHERE amount > (SELECT AVG(amount) FROM transaction)) | 100 row(s) returned |
| 64 | 11:32:43 | SELECT co.company_name FROM company co WHERE EXISTS (SELECT company_id FROM transaction WHERE amount > (SELECT AVG(amount) FROM transaction)) | 100 row(s) returned |

Eliminaran del sistema les empreses que no tenen transaccions registrades, entrega el llistat d'aquestes empreses.

```
79    -- Eliminaran del sistema les empreses que no tenen transaccions registrades, entrega el llistat d'aquestes empreses.
80
81 •   SELECT co.company_name
82   FROM company co
83   WHERE NOT EXISTS (
84     SELECT tr.company_id
85     FROM transaction tr
86     WHERE declined = 0)
87 ;
```

The screenshot shows a database interface with a query editor and a results grid. The query retrieves company names that do not have any transactions recorded. The results grid is empty, and the action output shows two log entries indicating successful execution and retrieval of 0 rows.

| company_name |
|--------------|
|--------------|

Output:

| # | Time | Action | Message |
|----|----------|-----------------------------------------------------------------------------------------------------------------------|---------------------|
| 64 | 11:32:43 | SELECT co.company_name FROM company co WHERE NOT EXISTS (SELECT tr.company_id FROM transaction tr WHERE declined = 0) | 100 row(s) returned |
| 65 | 11:33:54 | SELECT co.company_name FROM company co WHERE NOT EXISTS (SELECT tr.company_id FROM transaction tr WHERE declined = 0) | 0 row(s) returned |

Observem que no retorna cap resultat. Per tant, hem de deduir que totes les companyies tenen transaccions registrades. Podem comparar el nombre total de companyies (100), amb el total de companyies diferents que han fet alguna transacció.

Nivell 2

Exercici 1

Identifica els cinc dies que es va generar la quantitat més gran d'ingressos a l'empresa per vendes. Mostra la data de cada transacció juntament amb el total de les vendes.

```
63      -- Nivell 2
64      -- Exercici 1
65      -- Identifica els cinc dies que es va generar la quantitat més gran d'ingressos a l'empresa per vendes. Mostra la data de cada t
66
67 •  SELECT SUM(amount) AS TotalVentesDiaries, DATE(timestamp) AS Data
68     FROM transaction tr
69     GROUP BY Data
70     ORDER BY TotalVentesDiaries DESC
71     LIMIT 5;
72
```

Result Grid | Filter Rows: _____ | Export: _____ | Wrap Cell Content: _____

| TotalVentesDiaries | Data |
|--------------------|------------|
| 14337.44 | 2022-12-13 |

| China | 252.60 |

Result 49 x

Action Output

| # | Time | Action | Message |
|--------|----------|---------------------------------------------------------------------------------|--------------------|
| 100185 | 13:33:26 | SELECT co.country AS pais, ROUND(AVG(tr.amount), 2) AS MitjanaVendesXpais FR... | 15 row(s) returned |

Exercici 3

En la teva empresa, es planteja un nou projecte per a llançar algunes campanyes publicitàries per a fer competència a la companyia "Non Institute". Per a això, et demanen la llista de totes les transaccions realitzades per empreses que estan situades en el mateix país que aquesta companyia.

Mostra el llistat aplicant JOIN i subconsultes.

```
121 •   SELECT * FROM transaction tr
122     JOIN company co ON co.id = tr.company_id
123     WHERE co.country = (
124         SELECT country FROM company
125         WHERE company_name = 'Non institute');
126
```

The screenshot shows a database interface with a results grid containing 13776 rows. The columns include: id, credit_card_id, company_id, user_id, lat, longitude, timestamp, amount, declined, id, and company_name. The data is filtered by the condition WHERE co.country = (SELECT country FROM company WHERE company_name = 'Non institute'). The results show transactions from various countries, with the majority being from 'b-2246'.

| id | credit_card_id | company_id | user_id | lat | longitude | timestamp | amount | declined | id | company_name |

Mostra el llistat aplicant solament subconsultes.

```
145 •   SELECT t.*, c.*
146     FROM (transaction t, company c)
147     WHERE company_id IN (
148         SELECT id FROM company|
149             WHERE country = (
150                 SELECT country FROM company
151                 WHERE company_name = 'Non institute'
152             )
153     )
154     AND t.company_id = c.id
155 ;
```

The screenshot shows a database interface with a results grid containing 13776 rows. The columns are identical to the first query. The data is filtered by the condition WHERE company_id IN (SELECT id FROM company WHERE country = (SELECT country FROM company WHERE company_name = 'Non institute')). The results show transactions from various countries, with the majority being from 'b-2246'.

| id | credit_card_id | company_id | user_id | lat | longitude | timestamp | amount | declined | id | company_name |

En aquesta solució, hem fet la cerca a les dues taules al FROM, fent servir el WHERE condicional, per eliminar els resultats incorrectes generats.

Originalment, per mostrar tots els camps de la taula company, hem demanat les dades de les companyies amb subconsultes per cada camp.

```

130 •   SELECT t.*,
131       (SELECT company_name FROM company c WHERE c.id = t.company_id) AS Nom_companyia,
132       (SELECT phone FROM company c WHERE c.id = t.company_id) AS telefon,
133       (SELECT email FROM company c WHERE c.id = t.company_id) AS emailo,
134       (SELECT country FROM company c WHERE c.id = t.company_id) AS pais,
135       (SELECT website FROM company c WHERE c.id = t.company_id) AS website
136   FROM transaction t
137   WHERE company_id IN (
138       SELECT id FROM company|
139       WHERE country = (
140           SELECT country FROM company
141           WHERE company_name = 'Non institute'
142       )
143   );

```

Nivell 3

Exercici 1

Presenta el nom, telèfon, país, data i amount, d'aquelles empreses que van realitzar transaccions amb un valor comprès entre 350 i 400 euros i en alguna d'aquestes dates: 29 d'abril del 2015, 20 de juliol del 2018 i 13 de març del 2024. Ordена els resultats de major a menor quantitat.

```
110 •   SELECT company_name, phone, country, SUM(tr.amount) s_amount, DATE(tr.timestamp) data FROM company co
111 JOIN transaction tr ON tr.company_id = co.id
112 WHERE DATE(tr.timestamp) IN ("2015-04-29", "2018-07-20", "2024-03-13")
113 GROUP BY tr.company_id, data
114 HAVING s_amount BETWEEN 350 AND 400
115 ORDER BY s_amount DESC
116
117 ;
118
```

Exercici 2

Necessitem optimitzar l'assignació dels recursos i dependrà de la capacitat operativa que es requereixi, per la qual cosa et demanen la informació sobre la quantitat de transaccions que realitzen les empreses, però el departament de recursos humans és exigent i vol un llistat de les empreses on especifiquis si tenen més de 400 transaccions o menys.

```
125 •   SELECT company_id, company_name AS nom, COUNT(tr.id) AS total,
126 CASE
127 WHEN COUNT(tr.id) < 400 THEN 'Menys de 400 transaccions'
128 ELSE 'Mes de 400 transaccions'
129 END AS transaccions
130 FROM transaction tr
131 JOIN company co ON co.id = tr.company_id
132 WHERE declined = 0
133 GROUP BY company_id
134 ORDER BY total DESC
135 ;
```
